2 Door System

Step 3

Mounting floor channel, bottom pivot base and bottom guide

Make a floor recess for the bottom pivot base plate, and fix the plate with 4 screws.
 Make a floor recess for the bottom channel
 X = length of channel

Insert the top pivot into track and raise the top pivot pin so that the door can go under the assembly

Insert the bottom pivot pin in the base plate and release the top pivot pin inside the top plate.

Bottom guide to be installed
 55mm from the edge of the door

Step 4

Levelling door and insert next leaf

After ensuring the door level, tighten the 2 screws to fix the top pivot(1), afterwards tighten the grub screw to secure the top pivot pin(2)

Insert the top hanger into track and the bottom guide into bottom channel.

Bring assembly in position as seen in the left picture, ensure the level by adjusting the hanger bolt (after adjusting put the lock washer in place) and secure with screws.

Follow this step until the desired number of doors is achieved
